Dubai

Information Science Engineering graduate with a strong foundation in Software development, databases, and backend systems. Currently working on building an end-to-end logistics and freight management application with real-world business workflows. Quick learner and team player with good problem-solving skills and a practical approach to development.

SKILLS

Technical skills: Python, JavaScript, Java, TypeScript, SQL, PostgreSQL, MongoDB

Key Concepts: Data Structures & Algorithms, OOP, System Design, Machine Learning

Backend & Tools: Node.js, Express.js, Prisma ORM, AWS S3, Swagger, Postman, Git, Docker, CI/CD

Frontend: HTML5, CSS3, React.js

Testing: Unit Testing, Debugging

Soft Skills: Communication, Teamwork, Problem Solving, Time Management

EDUCATION

BE in Information Science Engineering – NMAMIT, NITTE

2021-2025

Class 12-PCMB, St. Aloysius Pre-University College, Mangalore

2019-2021

EXPERIENCE

Software Engineer, Freelancing

Dec 2025 – present

- Building a Backend logistics application handling quotes, pricing, bookings, shipments, and tracking.
- Designing REST APIs using Node.js, Express, and PostgreSQL with Prisma ORM.
- Implementing authentication, role-based access, document uploads, and pricing workflows.

Intern, Ybi Foundation, Mangalore

Jan 2025 – May 2025

- Gained hands on experience in financial data analysis and visualisation using Power BI.
- Created dynamic dashboard to track income, expenses, and investments for informed decision-making.

- Strengthened skills in data visualisation and financial analysis, laying a foundation for future roles in business analytics.

Intern, Isarva Infotech Private Limited, Mangalore

Feb 2023 – Mar 2023

Gained experience in the web development domain by utilising HTML, C, Python, and JavaScript.

PROJECTS

Major Project – Ensemble Framework for Malware Detection Using Machine Learning.

- Built an ensemble ML-based malware detection system using dynamic analysis
- Used Cuckoo Sandbox to extract behavioural features from malware samples
- Implemented Random Forest, SVM, KNN, Naive Bayes, and Boosting models
- Applied feature selection (RFE) to improve accuracy and reduce overfitting
- Achieved ~97% accuracy using soft-voting ensemble classification

DSD Project – Bank token number display.

- Designed a digital token display using a 74LS90 counter and a 7-segment display
- Implemented push-button-based token increment with regulated power supply
- Improved queue management by enabling systematic customer servicing

Mini Project – Career Guidance Web Application

- Developed a career guidance web app to help students make informed career decisions
- Built responsive web pages using HTML, CSS, and JavaScript
- Designed a user-friendly interface for exploring career options based on interests
- Improved career awareness and decision-making through structured guidance

Personal projects – Built sample websites, simple games, simple AI chatbot

- Designed sample websites for demo companies using HTML, CSS, and JavaScript
- Created responsive layouts with structured content and navigation
- Showcased UI design and front-end development skills
- Developed a basic car game using JavaScript
- Implemented game logic, controls, and collision handling
- Improved understanding of event handling and animations
- Built a simple AI chatbot to respond to user queries
- Implemented basic conversational logic using JavaScript
- Gained experience in chatbot flow design and user interaction

Additional Information

UAE Driving License under process – final road test pending.
